

Fully-Managed Dental Practice Sanitized Linen & Apparel Program

As the American Dental Association[®] begins to develop guidance for Personal Protective Equipment (PPE), dentists nationwide are turning to sanitized apparel.

Improve on safety by switching to an apparel rental and laundry partner who provides sanitized laundry, features robust infection prevention processes, and only services healthcare — putting your patients and staff safety first.

As part of a fully managed apparel and linen program from ImageFIRST, we provide quality assurance and infection prevention that exceeds standards. We call this approach “*AssuranceFIRST*.”

Ensure the safety of your staff and patients with infection prevention and quality assurance in our comprehensive linen program.

Our programs, designed for dental practices, orthodontists, endodontists, and oral surgeons, include:

- Scrub and lab coats
- Scrub storage solutions – including the ScrubVAULT[®] Scrub Management System
- Isolation gowns
- Draw and drape sheets

These products are part of a complete program that comes with remarkable service, aimed to free your staff from managing linen inventory.

Isolation Gown Options

Rental:

36 month agreement: \$2.42/gown. Option to terminate at the end of 12 months & 24 months if total gown inventory is purchased at a rate of \$19.25/gown. No requirement to purchase if 36 month commitment is fulfilled.

**Rental has no upfront investment charge. Customers are billed weekly for their inventory and this includes cleaning, pickup, delivery and packaging.

Direct Purchase:

Purchase gowns at a rate of \$20.25/gown. Minimum purchase of 100 gowns. No agreement term required.

Direct Purchase w/cleaning:

Purchase gowns at a rate of \$19.25/gown. ImageFIRST will wash gowns at a rate of \$1.50 each. No agreement term required.

Superior Infection Prevention

Healthcare-associated infections (HAIs) have been linked to readmissions after a patient's stay, that's why your comprehensive infection prevention should include linen.

To that end, we developed the **Triple BioShield Protection®** process comprised of three steps that go beyond regulatory standards to help ensure your patients' safety:

Dead on Contact

Our advanced wash process sanitizes linens and garments, killing 99.999% of common pathogens.

Bacteria-Inhibitor Softener

A softener and protective coating is applied to every product during the laundering process. This coating creates a zone of inhibition on our products, which means that any bacteria that may land on the products during their use won't be able to spread.

Plastic Barrier

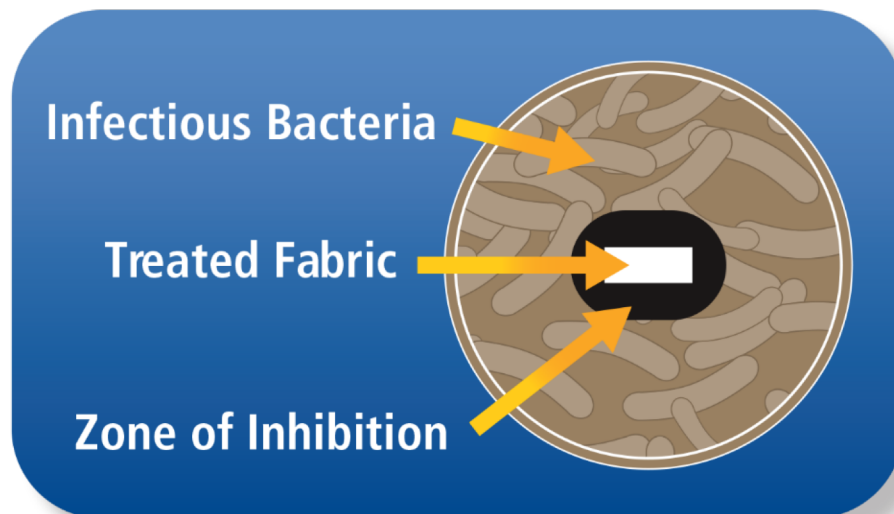

All our products are encased in a plastic barrier for delivery to ensure that your items are as clean and sanitized when they get to you as they were when they left our plant.

Bacteria-Inhibitor Softener

Linen is a vector for transmission of bacteria. A contaminated hand is all it takes for bacteria to grow and spread, which could be transmitted to another person.

Bacteriostatic Fabric Softener

One of the steps in the Triple BioShield Protection process, the BacStat BioShield, includes a bacteriostat agent. This softener is an EPA-registered concentrated bacteriostat that is applied to linen during the washing process and creates a zone of inhibition, stopping bacteria from reproducing thus limiting the growth and spread of bacteria.

BacStat creates a "Zone of Inhibition" on treated fabrics to slow the growth of bacteria

This softener also makes linen and gowns softer for a more comfortable patient experience and satisfaction. Not only does this agent address health concerns associated with bacteria, but it also reduces odors by inhibiting the growth of ammonia-producing organism. This agent provides residual bacteriostatic activity against odor-causing Gram Positive and Gram Negative bacteria.
